**Hobby Farms Beef Cattle: Keeping a Small-Scale Herd for Pleasure and Profit**, written by Ann Larkin Hansen, serves as an excellent introduction to raising cows for food or simply to graze while mowing and fertilizing the pasture. This colorful guide offers experienced hobby farmers and beginners all of the essential information necessary to purchase and maintain a small herd of beef cattle. While managing her own hobby farm in Wisconsin, Hansen shares her expertise in all things farm and has authored numerous books such as *Making Hay*, *The Organic Farming Manual*, and *Finding Good Farmland*. In this comprehensive book *Beef Cattle*, Hansen corrals the hobby farmer into the world of cowboys and cowgirls: she begins, "Beef cattle are as much at home on the hobby farm as they are on the range." This colorful primer begins with the basics, from biological traits and breeds to behavior and life cycle, and describes exactly what's required for a hobby farmer to maintain a herd of cattle:the four F's:breeding, feed, fields, and facilities. Given the expense involved in the purchase and maintenance of beef cattle, all hobby farmers will welcome Hansen's sound and sensible advice on buying the right cattle, whether steer calves for meat or breeding stock for building up a herd. The buying chapter helps farmers focus on what to look for when selecting cattle; how cows, heifers, and bulls are priced; where to purchase; and how to get cattle to your farm. The feeding and nutrition of cattle is a complicated topic, and Hansen breaks it down into the three basic components that every keeper needs to understand: pasture, hay, and grain. With directness and clarity, she explains the ins and outs of grazing, selecting ideal foodstuffs, using salt and minerals, and maintaining good weight on the herd. The reader can rely on her expert advice to learn the fundamentals of handling cattle, including herding, loading, and transporting cattle, as well as keeping beef cattle healthy through preventive methods, vaccinations, parasite control and veterinary assistance. For hobby farmers planning to breed their livestock, *Beef Cattle* includes a chapter on pairing cows and heifers, the actual breeding, artificial insemination, the care of pregnant cows, calving, caring for the young, and weaning calves. The final chapter of the book "Marketing and Processing Your Cattle" is geared toward hobby farmers looking to get beef processed, grade meat, and sell the final product. Sidebars of fun trivia, stories from farmers, and useful advice appear throughout the handbook. A glossary of over 100 terms; an appendix of health issues; a resource section of useful websites, books, and periodicals; and a detailed index complete the book.

Ethics for the Information Age is appropriate for any standalone Computers and Society or Computer Ethics course offered by a computer science, business, or philosophy department, as well as special modules in any advanced CS course. It is also appropriate for readers interested in computers and society or computer ethics. In an era where information technology changes constantly, a thoughtful response to these rapid changes requires a basic understanding of IT history, an awareness of current issues, and a familiarity with ethics. Ethics for the Information Ages unique in its balanced coverage of ethical theories used to analyze problems encountered by computer professionals in today's environment. By presenting provocative issues such as social networking, government surveillance, and intellectual property from all points of view, this market-leading text challenges students to think critically and draw their own conclusions, which ultimately prepares them to become responsible, ethical users of future technologies. Teaching and Learning Experience This program presents a better teaching and learning experience:for you and your students. It will help: Encourage Critical Thinking: A balanced, impartial approach to ethical issues avoids biased arguments, encouraging students to consider and analyze issues for themselves. Keep Your Course Current and Relevant: A thoughtful response to information technology requires an awareness of current information-technology-related issues. Support Learning: Resources are available to expand on the topics presented in the text.

This volume constitutes the thoroughly refereed conference proceedings of the 26th International Conference on Industrial Engineering and Other Applications of Applied Intelligence Systems, IEA/AIE 2013, held in Amsterdam, The Netherlands, in June 2013. The total of 71 papers selected for the proceedings were carefully reviewed and selected from 185 submissions. The papers focus on the following topics: auctions and negotiation, cognitive modeling, crowd behavior modeling, distributed systems and networks, evolutionary algorithms, knowledge representation and reasoning, pattern recognition, planning, problem solving, robotics, text mining, advances in recommender systems, business process intelligence, decision support for safety-related systems, innovations in intelligent computation and applications, intelligent image and signal processing, and machine learning methods applied to manufacturing processes and production systems.

This book offers a comprehensive look at an industry that plays a growing role in motor vehicle production in the United States.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.
