The broad range of opportunities available in IT coupled with the current skills shortage make it an ideal time for you to make your name in this rapidly developing sector. For anyone who wants to be the best and thinks they have what it takes to make it to the top, this book offers a wealth of advice and insider's tips on making it in the world of IT. Informative and inspirational, the book is packed with case studies, interviews with people working in the field and profiles of a number of major employers in the sector. With advice on the key skills you need to develop and detailed information on specific elements of a wide variety of IT jobs, this book tells you: where to find the top jobs how to get the top jobs, and how to get even higher once you are on your career fast-track. Complete with contact points, useful Web sites and addresses, this book is your guidebook to the top of the IT ladder.

In today's wireless environment, marketing is more frequently occurring at the server-to-device level-with that device being anything from a laptop or phone to a TV or car. In this real-time digital marketplace, human attributes such as income, marital status, and age are not the most reliable attributes for modeling consumer behaviors. A more effe

This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It will guide students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost-value reconciliation process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the 'real world'. They describe good practice in financial control while at the same time being honest about some of the more questionable practices that can - and do - happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to address when using their judgment to report turnover, profitability, cash flow, and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC/DOM1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. Examples drawn from practice demonstrate how work-in-progress (WIP) is reported in contracting. Cost value reconciliation reports are featured and the book demonstrates how adjustments are made for overmeasure, undermeasure, subcontract liabilities and WIP as well as explaining the processes that contractors use when analysing external valuations. This is the ideal core text for final year degree and post-graduate level modules on Quantity Surveying, Commercial Management, Construction Management and Project Management courses and will provide an invaluable source of reference for quantity surveyors and others who may be engaged in the financial management of construction projects. The book's companion website at <http://www.wiley.com/go/xxxx> www.wiley.com/go/rossfinancialmanagement/a offers invaluable resources for students and lecturers as well as for practising construction managers: end-of-chapter exercises + outline answers PowerPoint slides for each chapter ideas for discussion topics links to useful websites

Contains international features and updates, profiles of international figures, and updates and analyses of international accounting and auditing standards; UK domestic topics are included in the parent title: Accountancy.

Accounting for Construction follows on from Measuring Construction, edited by the same team. It extends the coverage of some of the material in the first volume and expands the range of related topics to include, inter alia, shadow economies, accounting for informal construction and the treatment of the built environment sector in national accounts. Taken together, the two volumes collate a range of topics that are only addressed, if addressed at all, in occasional academic papers and the publications of bodies such as national statistical offices and the World Bank. Accounting for Construction presents international examples from the UK, Australia and New Zealand and from both academic and professional contributors. This book is essential reading for all researchers and professionals interested in construction economics, construction management, and anyone interested in how the construction industry affects the global economy in ways previously under-represented in the literature.

Focussing on the dominance of the Big Four auditing firms – PwC, EY, Deloitte and KPMG – this concise volume provides an authoritative critical assessment of the state and future of the audit market, currently the subject of much debate and the focus of significant government enquiries. Drawing on extensive research and a vast collection of evidence from interviews with insiders, experts and users, it explores the key issues of audit quality, independence, choice and the growing expectation gap. Just as disruptive technologies are overturning other established sectors, this book explores their impact on accounting, financial reporting and auditing. It questions whether the Big Four-dominated audit market is prepared not only for the inevitable disruption of new technologies, but also the challenges of negative public perceptions, cynicism about regulation and demands for greater transparency. In the context of increasing high-profile corporate failures, this book provides a compelling scrutiny of the industry's failings and present difficulties, and the impact of future disruption. At this crucial time, it will be of great interest to students, researchers and professionals in accounting and auditing, as well as policy makers and regulators.
