Study & Master Agricultural Sciences Grade 12 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Agricultural Sciences.

Study & Master Agricultural Sciences Grade 10 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Agricultural Sciences. The comprehensive Learner's Book includes: * an expanded contents page indicating the CAPS coverage required for each topic * activities throughout that help develop learners' knowledge and skills * revision tasks and review at the end of each module that provides for consolidation of learning * case studies that link science to real-life situations and present balanced views on sensitive issues * 'information' boxes providing interesting additional information and 'Note' boxes that bring important information to the learner's attention * Glossary boxes to explain unfamiliar and difficult terms

From theoretical analysis to practical teaching tools, an indispensable guide for educators seeking to link feminist theory and activism to their teaching. Included are web sites, videos, recommended texts, and additional course outlines.

This book examines the roles of power and politics, governance and management, as well as accountability and professionalism in transforming the educational systems inherited from apartheid colonialism in South Africa. With a focus on the Eastern Cape province, with its vast stretches of rural settlements and a few urban sprawls, high levels of social inequality manifesting along racial lines and communities ruled by patriarchy, changing its provincial educational system is a mammoth task. This study traces the efforts to set up an integrated Eastern Cape Department of Education and the national interventions introduced to assume responsibility for running it. The study is unique in its utilization of the 'theory of change' model and positions that theory in a local setting by examining the inherited socio-economic contexts, the reasons, conditions and paradigms behind the status quo, and by projecting what needs to be done to attain the objectives.

Teachers make a difference. The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation. Yet there are many questions about how teachers are being prepared and how they ought to be prepared. Yet, teacher preparation is often treated as an afterthought in discussions of improving the public education system. Preparing Teachers addresses the issue of teacher preparation with specific attention to reading, mathematics, and science. The book evaluates the characteristics of the candidates who enter teacher preparation programs, the sorts of instruction and experiences teacher candidates receive in preparation programs, and the extent that the required instruction and experiences are consistent with converging scientific evidence. Preparing Teachers also identifies a need for a data collection model to provide valid and reliable information about the content knowledge, pedagogical competence, and effectiveness of graduates from the various kinds of teacher preparation programs. Federal and state policy makers need reliable, outcomes-based information to make sound decisions, and teacher educators need to know how best to contribute to the development of effective teachers. Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now.
