One of the primary applications of human factors engineering is in the aviation domain, and the importance of human factors has never been greater as U.S. and European authorities seek to modernize the air transportation system through the introduction of advanced automation. This handbook provides regulators, practitioners, researchers, and educators a comprehensive resource for understanding and applying human factors to air transportation.

This book first addresses substantive issues, beginning with the changing role of business torts in antitrust litigation and continuing with the extent to which antitrust concepts have been invoked in business tort litigation (focusing on the competitive privilege and the Noerr-Pennington defense). The next chapter surveys the field of unfair competition, followed by an examination of the business torts of commercial disparagement and defamation. Subsequent chapters address interference torts, the common law and statutory torts of fraud and negligent misrepresentation, the field of misappropriation of trade secrets, and recent developments in the area of punitive damages.
