The Crucial Role of Symptom Management in Cancer Care. Listening to feedback from patients is still one of the most important ways providers can assess and plan treatments for patients with cancer. However, symptom management is never as simple as screening for pain or asking about fatigue: it involves complex decision making, evidence-based interventions, and the support of the entire care team.

In many pancreatic cancers, control of symptoms is as important as treatment aimed at controlling the disease. When the disease is too widespread to be removed, palliative surgery or minimally invasive interventions may help prevent blockage of bile ducts and relieve symptoms such as jaundice, itching of the skin, nausea, vomiting, and fever.

A cancer may also cause symptoms like fever, extreme tiredness (fatigue), or weight loss. This may be because cancer cells use up much of the body's energy supply, or they may release substances that change the way the body makes energy from food. Cancer can also cause the immune system to react in ways that produce these signs and symptoms.

Janet L. Abrahm argues that all causes of suffering experienced by people with cancer, be they physical, psychological, social, or spiritual, should be treated at all stages: at diagnosis, during curative therapy, in the event that cancer recurs, and during the final months. In the second edition of this symptom-oriented guide, she provides primary care physicians, advanced practice nurses, internists and oncologists with detailed information and advice for alleviating the stress and pain of patients and family members alike. The new edition includes the latest information on patient and family communication and counseling, on medical, surgical, and complementary and alternative treatments for symptoms caused by cancer and cancer treatments, and on caring for patients in the last days and their bereaved families. Updated case histories, medication tables, Practice Points, and bibliographies provide clinicians with the information they need to treat their cancer patients effectively and compassionately.

An established text showing doctors and careers how to provide a high level of physical and psychological comfort.
