Get info on the 3.5 MW Caterpillar 3516 Diesel Power Plant Fill out the form below to request more information and a WPP representative will get back to you. Generators

The project was implemented at the Mill Seat landfill located in the Town of Bergen, Monroe County, New York. The landfill was previously equipped with a landfill gas collection system to collect methane gas produced by the bioreactor landfill and transport it to a central location for end use. A landfill gas to energy facility was also previously constructed at the site, which utilized generator engines, designed to be powered with landfill methane gas, to produce electricity, to be utilized on site and to be sold to the utility grid. The landfill gas generation rate at the site had exceeded the capacity of the existing generators, and the excess landfill gas was therefore being burned at a candlestick flare for destruction. The funded project consisted of the procurement and installation of two (2) additional 800 KW Caterpillar 3516 generator engines, generator sets, switchgear and ancillary equipment.

For more than a century, the U.S. Navy's battleships, cruisers, destroyers, submarines and amphibious warfare vessels have depended on a small group of specialized auxiliary ships to provide fuel, food, ammunition, parts and other material support and services. Without these workhorse vessels, the U.S. Fleet could not have won in World War II and it could not today deploy and remain on station in the far distant waters of the world. This book provides the rosters, histories, specifications and illustrations of 130 different auxiliary ship types in the last 100 years, including the little-known ones, the latest expeditionary fast transports and future towing, salvage and rescue ships.
