When a Kryogenetics engineer working at a military facility discovers how to revitalize people to remain at their present age, and remain there for 100 years at a time, all hell breaks loose. Military, Mafia, and space aliens, greedy rich government persons, there comes into being the race of who gets the secret first. The good guys against the bad, or so it seems. The engineer and his wife are kidnapped by paid mercenaries recruited by doublecrossing persons wanting this information for themselves and stand to make billions and billions of dollars. One man with a secret. An adventure follows that will span the United States, Europe, the fringes of outer space, and space aliens, and that will tax the ingenuity of his mom and dad to get them free from their glacial entombment.

In the collection of short stories entitled “Curry Goat and Calypso,” the author assumes the name of Juggernaut in exploring his thoughts and experiences from living and travelling in India, Trinidad, Jamaica and the United States. For example, in India Juggernaut explores the culture of Baba and idol worship; in Trinidad and Jamaica the easy going life style; in the United States the practices in the animal and yellow grease recycling business. In some stories, Juggernaut expresses his anguish over the bizarre sounding names given in the past to some tropical fruit and vegetable plants that now needs renaming to reflect their true identity. A wide range of subject matter on local culture and practices was covered in the stories always trying to find some humor to entertain the readers.

Guided Math Workstations allow teachers to address their students' varied learning needs within a carefully planned numeracy-rich environment where students are challenged to not just do math, but to become mathematicians. Teachers will be able to successfully target the specific needs of learners with small-group lessons as students work independently on math workstation tasks. Each workstation task includes: an overview of the lesson, materials, objective, procedure, and differentiation tactics; a Student Task card with directions and a materials list for the task to help with implementation and organization; a Talking Points card with math vocabulary words and sentence stems to encourage mathematical discourse; and additional resources for each task.
