Metasploit: A Penetration Tester's Guide fills this gap by teaching you how to harness the Framework, use its many features, and interact with the vibrant community of Metasploit contributors. The authors begin by building a foundation for penetration testing and establishing a fundamental methodology. From there, they explain the Framework's conventions, interfaces, and module system, as they show you how to assess networks with Metasploit by launching simulated attacks. Change is coming to insurance. The tradition-bound P&C industry is on the cusp of the most radical change since the invention of the automobile. And leaders are unprepared for the size, scale, and speed of what's to come from the wave of millennials, new technology, and venture capital funding coming our way. Insurance has been largely immune to upheavals for reasons that startups do not comprehend. Brand recognition, reams of customer data, legal contracts and regulation all make insurance much harder to conquer for insurtech startups. But this time is truly different. Forces have been unleashed that will upend the industry sooner than you think. Collaborate or compete? Start small or go big? Pure tech play or MGA? The End of Insurance As We Know It bridges the divide between the traditional players, startups, and investors to show the areas where opportunities for disruption are ripe and what technologies you need to know about to stay relevant in our revolutionary time. Learn why insurance is the perfect digital product and gain a competitive edge no matter where you stand today in the ecosystem. Rob Galbraith has 20 years of experience implementing innovative ideas in the P&C insurance industry to expand markets and improve profitability. Known as The Most Interesting Man in Insurance, Rob is a frequent speaker at industry conferences, recognized thought leader, and insurtech influencer.

Understanding the contours of your social network can dramatically enhance personal relationships, work life, and even your global impact. Are you an Expansionist, a Broker, or a Convener? The answer matters more than you think. . . . Yale professor Marissa King shows how anyone can build more meaningful and productive relationships based on insights from neuroscience, psychology, and network analytics. Conventional wisdom says it's the size of your network that matters, but social science research has proven there is more to it. King explains that the quality and structure of our relationships has the greatest impact on our personal and professional lives. As she shows, there are three basic types of networks, so readers can see the role they are already playing: Expansionist, Broker, or Convener. This network decoder enables readers to own their network style and modify it for better alignment with their life plans and values. High-quality connections in your social network strongly predict cognitive functioning, emotional resilience, and satisfaction at work. A well-structured network is likely to boost the quality of your ideas, as well as your pay. Beyond the office, social connections are the lifeblood of our health and happiness. The compiled results from dozens of previous studies found that our social relationships have an effect on our likelihood of dying prematurely--equivalent to obesity or smoking. Rich stories of Expansionists like Vernon Jordan, Brokers like Yo-Yo Ma, and Conveners like Anna Wintour, as well as personal experiences from King's own world of connections, inform this warm, engaging, revelatory investigation into some of the most consequential decisions we can make about the trajectory of our lives.
