The best cars for £100 per month. The £100 mark can't buy you much in 2020.

American business folklore is awash with the adventures of successful entrepreneurs. Still, most of these stories are about Americans, neglecting important and courageous entrepreneurs from other countries. Made in Korea recounts the story of how Chung Ju Yung rose from poverty to build one of the world's largest and most successful building empires - Hyundai - through a combination of creative thinking, tenacity, timing, political skills, and a business strategy that few competitors ever understood. Chung entered the shipbuilding business with no experience and went on to create the world's largest shipyard. He began making automobiles when foreign experts unanimously predicted he would fail, and he started a global construction company that has built some of today's greatest architectural wonders. He even convinced the International Olympic Committee to select South Korea over Japan as the site for the highly successful 1988 Olympics. Unlike most CEOs of major firms, Chung has always preferred the company of his workers to that of the global executive elite. Hard work, creativity and a capacity to never give up - this is the essence of Chung's life. In each of his ventures, he exhibited a sheer determination to succeed, regardless of the obstacles, and he worked tirelessly to instill this drive in all of his employees. Even today, in the midst of Korea's worst economic crisis in over four decades, Chung's company is busy implementing plans to emerge as an even stronger contender in the world economy. Illustrated with 32 pages of colour photographs not previously seen in the West, including photos of Chung's recent historic visit to North Korea in 1998, Made in Korea takes stock of Chung's entire life, highlighting both his contributions to society and the lessons his work can teach to aspiring entrepreneurs.

The use of comparisons to explain, analyze and understand social and economic phenomena is recognized as a valuable social sciences tool. This textbook deals with the differences in management and organization between nations and their effects on multinational enterprises. In comparing management practice across the world, the authors cover themes such as national cultures, diversity and globalization. Students are guided through the key business disciplines, providing a broad introduction to the field and including truly global coverage. With student and instructor friendly resources such as chapter summaries, mini-case scenarios, larger case studies and power-point slides, this book is core reading for students of international business and international management.

This book is a printed edition of the Special Issue "Sustainable Business Models" that was published in Sustainability

This casebook demonstrates that the future of global business lies in how well the multinational landscape is charted and how the importance of Asian market leaders is deeply embedded in it. It offers international management students and researchers an extensive guide to the business history, strategy development, and foreign market entry modes used by emerging Asian multinationals. The cases focus on well-known companies such as Lenovo, Alibaba, Infosys, Huawei, Panasonic, and Rakuten. These companies, all of which generate huge revenues in their own countries (e.g. in China, India, South Korea, Taiwan, Vietnam), are now becoming increasingly sophisticated and striving to become global brands, while also enjoying the active support of their governments in terms of their international business. Readers will learn about the current multinational landscape in Asia, the management challenges, and the future implications for traditional western companies seeking to retain their market share. Chapters on corporate entrepreneurship, human resource management and intercultural competence, and current branding trends in Asia will provide a cutting-edge update on international business strategy for students and practitioners alike.

Whether youre interested in better performance on the road or extra horsepower to be a winner on the track, this book gives you the knowledge you need to get the most out of your engine and its turbocharger system. Find out what works and what doesnt, which turbo is right for your needs, and what type of set-up will give you that extra boost. Bell shows you how to select and install the right turbo, how to prep your engine, test the systems, and integrate a turbo with EFI or carbureted engine.

Steenkamp introduces the global brand value chain and explains how brand equity factors into shareholder value. The book equips executives with techniques for developing strategy, organizing execution, and measuring results so that your brand will prosper globally. What sets strong global brands apart? First, they generate more than half their revenue and most of their growth outside their home market. Secondly, their brand equity is responsible for a massive percentage of their firm ' s market value. Third, they operate as single brands everywhere on the planet. We find them in B2C and B2B industries, among large and small companies, and among established companies and new businesses. The stewards of these brands have a set of skills and knowledge that sets them apart from the typical corporate marketer. So what ' s their secret? In a world that is globalizing, but not yet globalized, how do you build a powerful global brand that resonates universally but also accommodates local nuances? How do you ensure that it is dynamic and flexible enough to change at market speed? World-class marketing expert Jan-Benedict Steenkamp has studied global brands for over 25 years on six continents. He has distilled their practices into eight tools that you can start using today. With case studies from around the world, Steenkamp ' s book is provocative and timely. Global Brand Strategy speaks to three types of B2C and B2B managers: those who want to strengthen already strong global brands, those who want to launch their brands globally and get results, and those who need to revive their global brand and stop the bleeding.

This book has been created on the basis of contributions to the 54th International Conference of Machine Design Departments that was held for the 60th anniversary of Technical University of Liberec. This international conference which follows a tradition going back more than 50 years is one of the longest-running series of conferences held in central Europe, dealing with methods and applications in machine design. The main aim of the conference was to provide an international forum where experts, researchers, engineers and industrial practitioners, managers and Ph.D. students could meet, share their experiences and present the results of their efforts in the broad field of machine design and related fields. The book has seven chapters which focus on new knowledge of machine design, optimization, tribology, experimental methods and measuring, engineering analyses and product innovation. Authors presented new design methods of machine parts and more complex assemblies with the help of numerical methods such as FEM. Research, measurements and studies of new materials, including composites for energy-efficient constructions are also described. The book also includes solutions and results useful for optimization and innovation of complex design problems in various industries.
