Why we are on the cusp of a new economic era that will make the changes and challenges of the Information Era seem like child's play From the bestselling authors of Blur—a defining book of the Information Age—comes a startling glimpse into the near future and the emerging economy that awaits us. It's Alive foretells the jolt the world is about to receive as the science of molecular evolution races out of the laboratories and into the business world. Think back to the early 1970s. Imagine the opportunities for your business, career choice, and investments had you received an advance report on the ways in which computer and information technology would revolutionize the world. It's Alive provides that opportunity today: a realistic and persuasive look into the future—the molecular economy—and how it is starting to overtake and reshape the Information Age. Today's gene

mapping and molecular engineering are equivalent to the introduction of transistor radios at the advent of the information economy. Solid-state technology moved from the labs into the business arena, providing in turn the transistor, the microprocessor, and the modem—and the information business. During the next ten years, molecular technology will follow the same pattern, moving from the lab and into the basic operation of the corporation itself. Chris Meyer and Stan Davis are our guides in understanding this new future. They show that not only biological systems evolve. The rules of evolution help explain the process of change in biology, business, and the economy, thereby providing a management guide to the business world around the corner. It's Alive is not science fiction or futurism. It bases its insights and predictions on the impact the molecular economy is already having in such diverse business environments as manufacturing, financial services, and energy. Through in-depth case studies of Capital One Financial, the U.S. Marine Corps, British Petroleum, and the biotech firm Maxygen, Meyer and Davis show how adaptive behavior works in the real world. As the rules of evolution combine with the connected economy, our business world will become unpredictable, volatile, and continually adaptive—in other words, alive. Also available as an eBook.

globalization and technology on managers operating in a global context.

It has become a widely-recognized fact that entrepreneurs and information technology have become the backbone of the world economy. The increasing penetration of IT in society and in most of industries/businesses, as well as the joining forces of entrepreneurship and innovation in the economy, reinforce the need for a leading and authoritative research handbook to disseminate leading edge findings about entrepreneurship and innovation in the context of IT from an international perspective. Information Technology Entrepreneurship and Innovation presents current studies on the nature, process and practice of entrepreneurship and innovation in the development, implementation, and application of information technology worldwide, as well as providing academics, entrepreneurs, managers, and practitioners with up-to-date, comprehensive, and rigorous research-based articles on the formation and implementation of effective strategies and business plans.

The Architecture of Neoliberalism pursues an uncompromising critique

of the neoliberal turn in contemporary architecture. This book reveals how a self-styled parametric and post-critical architecture serves mechanisms of control and compliance while promoting itself, at the same time, as progressive. Spencer's incisive analysis of the architecture and writings of figures such as Zaha Hadid, Patrik Schumacher, Rem Koolhaas, and Greg Lynn shows them to be in thrall to the same notions of liberty as are propounded in neoliberal thought. Analysing architectural projects in the fields of education, consumption and labour, *The Architecture of Neoliberalism* examines the part played by contemporary architecture in refashioning human subjects into the compliant figures - student-entrepreneurs, citizen-consumers and team-workers - requisite to the universal implementation of a form of existence devoted to market imperatives.

"Considerable progress has been made in understanding the underlying mechanisms driving the long-wave behavior of the world socioeconomic development. In spite of this progress one recognizes that many aspects related with these underlying driving forces remained unsolved. One of these aspects endured, perhaps as the most controversial one: the close relationship between K-waves and the outbreak of major wars. Social scientists and politicians are well acquainted with the fact that chance events have been responsible for

the outbreak of wars and their course and outcome. Two main trends are now acknowledged: the increasing recognition of the existence of some cyclical patterns of warfare involving the core of the world system, and a shift toward newly evolving patterns involving non-state actors and asymmetric warfare. We may tentatively agree that wars are not merely the result of blind social and political forces, but patterned according to long socioeconomic cycles and the result of deep and general laws underlying the co-evolutionary unfolding of the world system. In the first part of this book, the reader will find a mix of contributions dealing with new visions or revisions of the concept of long waves considered from very different perspectives related to their unfolding. Those contributions discussing the issue of K-waves and their relation with military conflicts objectively, following old and / or new conceptualizations of the phenomenon, were selected to form the books second part. Finally those contributions with strong emphasis on the analysis of future scenarios, related or not related with warfare and / or world security compose the body of the third part."

three decades critical philosophy has been in discourse with architecture. Yet following the recent radical turn in contemporary philosophy, architecture's role in contemporary culture is rarely addressed. In turn, the architecture discourse in academia has remained ignorant of recent developments in radical philosophy. Providing the first platform for a debate between critics, architects and radical philosophers, this unique collection unties these two schools of thought. Contributors reason for or against the claim of the "missed encounter" between architecture and radical philosophy. They discuss why our prominent critical philosophers devote stimulating writings to the ideological impact of arts on the contemporary culture - music, literature, cinema, opera, theatre - without attempting a similar comprehensive analysis of architecture. By critically evaluating recent philosophy in relation to contemporary architecture, *The Missed Encounter of Radical Philosophy with Architecture* presents a thorough understanding of the new relationship between architecture and radical philosophy.

Convergenomics is about the megatrends that are shaping how people behave and organizations work. In this insightful analysis, Sang Lee and David Olson describe how globalization, digitization, changing demographics, changing industry mix, deregulation and privatization, commoditization of processes, new value chains, emerging new economies, deteriorating environment, and cultural conflicts have led to what they define as a convergence revolution. Lee and Olson discuss this convergence revolution from the perspectives of technology, industry, knowledge, open-source networking and bio-artificial convergence, and they explain how human systems are transformed by what they have named convergenomics. Understanding convergenomics can lead to innovative strategic approaches and, the authors contend, more agile businesses are already employing these approaches to become and remain competitive and to generate greater value in a world radically changed by e-commerce. Business leaders and 'students' of strategy at all levels will learn from this book how revolutionary developments

Advances in Service Network Analysis examines advances in the management and analysis of networks of organizations in service industries. In recent years recognition of the significance of inter-organizational networks for the provision of complex services, for example at tourist destinations, has stimulated discussion of numerous issues of theoretical and practical significance. These topics include governance, collaboration and partnerships between organizations of varying scale, sophistication and expertise, concern about leadership and trust in the management of service networks, and their overall contribution to social capital development in regions, sectors and in emergent economies. This book was originally published as a special issue of The Service Industries Journal.
