Information Technology is playing a Vital role in the modern world. It has revolutionized the way in which we used to live and think. All spheres of life are affected by the use of ICT and internet. The field of education is no exception. Education is the main tool of all round development of people, society and nation. Economic and social developments can be possible through education only. It is main instrument which sustains the all-round development and maintain the social and economic development of the country.

This work is the first explicit examination of the key role that mathematics has played in the development of theoretical physics and will undoubtedly challenge the more conventional accounts of its historical development. Although mathematics has long been regarded as the "language" of physics, the connections between these independent disciplines have been far more complex and intimate than previous narratives have shown. The author convincingly demonstrates that practices, methods, and language shaped the development of the field, and are a key to understanding the emergence of the modern academic discipline. Mathematicians and physicists, as well as historians of both disciplines, will find this provocative work of great interest.
