You are "Ungettable" you just don't know it yet. Chris Seiter's 'Ungettable' delivers a unique perspective on why men are attracted to women they can't have. If you're going through a devastating break up or you're tired of wasting your time dating when it seems like all the good guys are always taken. "Ungettable" will teach you the principles that can make a man put you on a pedestal. It will show you how you can make that ex come crawling back and finally win at the game of dating. Gone are the days of, - Men JUST looking for hookups- Having an ex ignore you- Being stood up or ghosted after things seemed to be going so well. - Worrying that you can't compare to 'the other woman'- Feeling like you're not good enough for a man- Not knowing what to say to an ex- Feeling like things 'won't work' for you- Having the right guys never picking you- Being friends with benefits- Not feeling "the spark" or 'chemistry' with your partners

This book reports the state of the art of energy-efficient electrical motor driven system technologies, which can be used now and in the near future to achieve significant and cost-effective energy savings. It includes the recent developments in advanced electrical motor end-use devices (pumps, fans and compressors) by some of the largest manufacturers. Policies and programs to promote the large scale penetration of energy-efficient technologies and the market transformation are featured in the book, describing the experiences carried out in different parts of the world. This extensive coverage includes contributions from relevant institutions in the Europe, North America, Latin America, Africa, Asia, Australia and New Zealand.

Kidnapped into slavery in 1841, Northup spent 12 years in captivity. This autobiographical memoir represents an exceptionally detailed and accurate description of slave life and plantation society. 7 illustrations. Index.

Motors use more than half of all electricity. This book outlines an approach for increasing motor and motor system efficiency through high-efficiency motors, optimized controls, improved component sizing and repair, better transmission hardware, and more comprehensive monitoring and maintenance. In addition to explaining technical opportunities in language understandable to non-engineers, the book reviews what is known about the existing motor stock and its use, chronicles experience to date with drive power programs and policies, and offers recommendations for future efforts. Full application of the measures described can cut U.S. electricity demand by up to 20 percent, save motor users and utilities billions of dollars, reduce pollutant emissions, and enhance productivity. The book was written by an interdisciplinary team of engineers, energy analysts, and program planners who collectively have over 50 years of experience in the energy efficiency field.

Thirteen-year-old Ryan Hawthorn has spent his life on display as a human exhibit in the multi-eyed Pipe Men's intergalactic zoo. When his father is accidentally poisoned, it's up to Ryan and his seven-year-old sister, Becky, to scour the universe for the antidote. Along the way, they encounter many strange creatures—from the doglike Hottini to the spindly-legged, hairy Xaxor—and learn that the Pipe Men (or, as Becky calls them, "overgrown drainpipes") are not kindly overlords, as they had been led to believe. It's not only the humans who are planning to rebel! A wildly imaginative middle grade space-travel adventure.

Until the 1990s, it was generally accepted that medicines were first developed for adults and their use in children was investigated later, if at all. One of the main tasks of hospital pharmacies was the manufacturing of child-appropriate formulations in a more or less makeshift way. The first change came in 1997 with U.S. legislation that rewarded manufacturers to do voluntary pediatric research. Ten years later, the European Union passed legislation that required manufacturers to discuss all pediatric aspects, including formulations, with the regulatory authorities as a condition of starting the registration procedure. In consequence, manufacturers must now cover all age groups, including the youngest ones. So far, pediatric formulations were more a focus for academic researchers. Through the changed regulatory environment, there is now a sudden high commercial demand for age-appropriate formulations. This book begins by highlighting the anatomical, physiological and developmental differences between adults and children of different ages. It goes on to review the existing technologies and attempts to draw a roadmap to better, innovative formulations, in particular for oral administration. The regulatory, clinical, ethical and pharmaceutical framework is also addressed.
