Let's sum it up. On May 14, 2016 By cestujblog. It has been some time since I first came to Lithuania. Actually it has been about three months. And I think I could say I know something about this country. And since I'm leaving soon, I want to sum up what I like and dislike about this country. Or Klaipeda.

The Sursum Corda (Latin: "Lift up your hearts" or literally, "Up hearts!", that is, "Hearts up!") is the opening dialogue to the Preface of the anaphora, also known as the "Eucharistic Prayer", in the Christian liturgy, dating back at least to the 3rd century and the Anaphora of the Apostolic Tradition. The dialogue is recorded in the earliest liturgies of the Christian Church, and is found in all ancient rites.

Jolene is a working mother of three who loves her kids and wants them to succeed. Her son, Craig, and twins, Rebecca and Isabel, look up to their mother; they want to help her in any way they can. She does her best to make them understand how money works, because she knows that's an important skill to have in life. She sends them to the grocer's and on other errands from time to time with a list and a budget, and she encourages them to put what they learn in maths class to good work. Maths, Jolene knows, can be a challenge for some kids. Textbooks are dry, boring, and more than a bit intimidating, and too many teachers just waffle on and on endlessly about sums and decimals and fractions and integers and quotients and the like without bothering to make it relevant or even interesting to students. But Jolene, like many mums, knows that kids are inherently keen to learn, so she thinks up clever ways to make them love using numbers. In this new, innovative approach to maths instruction, Catherine Daniel, an experienced accountant and teacher, weaves these lessons into a fictional story format. Now, readers can follow Craig, Rebecca, and Isabel as they learn that mastering numbers just makes life better. Before you know it, you'll probably wish Jolene was your own mum ... and you'll find that maths can be fun, easy, and a powerful skill to master!

Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics. Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason, limitless knowledge, and all of eternity in which to ponder choices. To understand decisions in the real world, we need a different, more psychologically plausible notion of rationality, and this book provides it. It is about fast and frugal heuristics--simple rules for making decisions when time is pressing and deep thought an unaffordable luxury. These heuristics can enable both living organisms and artificial systems to make smart choices, classifications, and predictions by employing bounded rationality. But when and how can such fast and frugal heuristics work? Can judgments based simply on one good reason be as accurate as those based on many reasons? Could less knowledge even lead to systematically better predictions than more knowledge? Simple Heuristics explores these questions, developing computational models of heuristics and testing them through experiments and analyses. It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate, dividing resources among offspring, predicting high school drop out rates, and playing the stock market. As an interdisciplinary work that is both useful and engaging, this book will appeal to a wide audience. It is ideal for researchers in cognitive psychology, evolutionary psychology, and cognitive science, as well as in economics and artificial intelligence. It will also inspire anyone interested in simply making good decisions.

Ideas of Quantum Chemistry, Volume One: From Quantum Physics to Chemistry shows how quantum mechanics is applied to molecular sciences to provide a theoretical foundation. Organized into digestible sections and written in an accessible style, it answers questions, highlighting the most important conclusions and essential mathematical formulae. Beginning with an introduction to the magic of quantum mechanics, the book goes on to review such key topics as the Schrödinger Equation, exact solutions, and fundamental approximate methods. The crucial concept of molecular shape is then discussed, followed by the motion of nuclei and the orbital model of electronic structure. This updated volume covers the latest developments in the field and can be used either on its own as a detailed introduction to quantum chemistry or in combination with Volume Two to give a complete overview of the field. Provides fully updated coverage on an extensive range of both foundational and complex topics Uses an innovative structure to emphasize relationships between topics and help readers tailor their own path through the book Includes new sections on Time-Energy Uncertainty and Virial Theorem

This book constitutes the thoroughly refereed post-proceedings of the 5th International Conference on Application of Natural Language to Information Systems, NLDB 2000, held in Versailles, France, in June 2000. The 29 revised full papers presented together with two invited papers and seven posters and demonstrations have passed through two rounds of reviewing and selection. The book offers topical sections on linguistics in information design, temporal databases, word-sense disambiguation, semantic relationships in databases, semantic and contextual document retrieval, natural language generation for answering email and OLAP, NLP techniques for information retrieval, Web information retrieval, technical databases, users and interactions in Web querying, and conceptual patterns.
