PUBLISHED WRITING. Karin H. Cather and Dick Margulis, *The Paper It's Written On: Defining your relationship with an editing client* (New Haven: Andslash Books, 2018). Karin Horwatt Cather, "Guarding the Gates: Expert Witness Testimony after Daubert," in *Malingering, Lies and Junk Science in the Courtroom*, ed. Jack Kitaeff. (Youngstown, New York: Cambria Press, 2007), 181.

This book presents a scholarly examination of some of the most popular psychiatric disorders, psychological syndromes, trauma disorders, addictions, and emotional injury claims in an attempt to determine if these are merely forms of malingering being used to achieve financial gain through litigation, or as a means of escaping criminal or civil responsibility. The book also examines unreliable and unsubstantiated treatment and assessment methods used by the mental health industry which find their way into the courtroom. There has been a significant amount of research (and anecdotal evidence) recently presented in the scientific literature regarding many of the above-mentioned topics. In addition, there is a seemingly neverending parade of legal cases in the media which are examples of some of the topics of this book (e.g., the Andrea Yates case and others). What distinguishes this edited book from others is (1) it does not shy away from confronting the unusual and even bizarre psychological phenomena which the legal profession must deal with; (2) it provides a solid theoretical review from renown psychologists, psychiatrists, and lawyers; (3) it provides the latest psychological research findings relating to various questionable disorders and methods; (4) it presents real-life experiences from the courtroom; and (5) relevant case law is discussed. This book will be of monumental use to practicing attorneys and law students, practicing psychologists and psychiatrists, and students in mental health and criminal justice. The book will allow for a clear understanding of "syndrome" evidence, its uses and abuses, malingering, phony and bogus "diseases" and "addictions," and how patients, clients, and defendants (as well as psychiatrists, psychologists, and lawyers) abuse the mental health and legal systems in order to escape criminal culpability, attain benefits, or make a case.

The Handbook of Police Psychology represents the contributions of over thirty police psychologists, all experts in their field, on the core subject matters of police psychology. Police psychology is broadly defined as the application of psychological principles and methods to law enforcement. This growing area includes topics such as screening and hiring of police officers; conducting screening for special squads (e.g., SWAT); fitness-for-duty evaluations; investigations, hostage negotiations; training and consultation, and stress counseling, among others. The book examines the beginnings of police psychology and early influences on the profession such as experimental investigations of psychological testing on police attitude and performance. Influential figures in the field of police psychology are discussed, including the nation's first full-time police psychologist who served on the Los Angeles Police Department, and the first full-time police officer to earn a doctorate in psychology while still in uniform with the New York Police Department.

In many criminal trials, forensic technical evidence is lacking and triers of fact must rely on the

reliability of eyewitness statements, identifications, and testimony; however, such reports can be riddled with deceptive statements or erroneous recollections. Based on such considerations, the question arises as to how one should weigh such eyewitness accounts given the theoretical and empirical knowledge in this field. *Finding the Truth in the Courtroom* focuses on how legal professionals, legal/forensic psychologists, and memory researchers can decide when statements or identifications are based on truthful or fabricated experiences and whether one can distinguish between lies, deception, and false memories. The contributors, key experts in the field, assemble recent experimental work and case studies in which deception or false memory plays a dominant role. Topics discussed relate to the susceptibility to suggestive pressure (e.g., "Under which circumstances are children or adults the most vulnerable to suggestion?"), the fabrication of symptoms (e.g., "How to detect whether PTSD symptoms are malingered?"), and the detection of deceit (e.g., "Which paradigms are promising in deception detection?"), among others. By using this approach, this volume unites diverse streams of research (i.e., deception, malingering, false memory) that are involved in the reliability of eyewitness statements.

Cop Doc delivers a unique map of police psychology. Retired NYPD sergeant Daniel Rudofossi delivers compelling inside scoops: the first-grade detective who nailed the Times Square bomber, intelligence enigmas unraveled by the DEA intelligence chief, wisdom culled from a best-selling novelist, a NYPD detective captain's narrative of the Palm Sunday Massacre, and much more. The book also includes an interview with a captain of hostage negotiations and a preface by the founder of the NYPD department of psychological services. Both students and seasoned professionals can find insights into policing and forensic psychology in these pages.?

The *Handbook of Police Psychology* features contributions from over 30 leading experts on the core matters of police psychology. The collection surveys everything from the beginnings of police psychology and early influences on the profession; to pre-employment screening, assessment, and evaluation; to clinical interventions. Alongside original chapters first published in 2011, this edition features new content on deadly force encounters, officer resilience training, and police leadership enhancement. Influential figures in the field of police psychology are discussed, including America's first full-time police psychologist, who served in the Los Angeles Police Department, and the first full-time police officer to earn a doctorate in psychology while still in uniform, who served with the New York Police Department. The *Handbook of Police Psychology* is an invaluable resource for police legal advisors, policy writers, and police psychologists, as well as for graduates studying police or forensic psychology.

The best way to grasp the essence of death scene investigation (DSI) is to witness its application, called the psychological autopsy, by an expert forensic scientist/clinician. This remarkable book affords the opportunity to delve into the challenges that the forensic mental health specialist and public safety professional confront in DSI. Suicides, and often death, are complex, multidetermined events. People, whether police investigators or mental health professionals, are generally perplexed, and even confused, when they are confronted by the equivocal case. Was it a suicide? Homicide? Accident? These are critical questions. Dr. Leenaars shows that DSI is, however, not mysterious; the reader can learn the generally accepted, evidence-based protocols of the psychological autopsy. Illuminated by individual (idiographic) case studies and general (nomothetic) research, this definitive guide allows the investigator to uncover the bare bones of a suicide or death.

First Published in 2017. Routledge is an imprint of Taylor and Francis, an Informa company.

This book is a comprehensive analysis of the definitions, concepts, and recent research on malingering, feigning, and other response biases in psychological injury/ forensic disability populations. It presents a new model of malingering and related biases, and develops a "diagnostic" system based on it that is applicable to PTSD, chronic pain, and TBI. Included are suggestions for effective practice and future research based on the literature reviews and the new systems, which are useful also because they can be used readily by psychiatrists as much as psychologists. In *Malingering, Feigning, and Response Style Assessment in Psychiatric/Psychological Injury*, Dr. Young ambitiously sets out to articulate and synthesize the polarities involved in the assessment of response styles in psychological disabilities, including PTSD, pain, and TBI. He does so thoroughly and very even-handedly, neither minimizing the degree that outright faking can be found in substantial numbers of examinees, nor disregarding the possibility that there can be causes for validity test failure other than malingering. He reviews the prior systems for classifying evidence of malingering, and proposes his own criteria for feigned PTSD. These are conservative and well-grounded in the prior literature. Finally, the book contains dozens of very recent references, giving testament to Dr. Young's immersion in the personal injury literature, as might be expected from his experience as founder and Editor in Chief for *Psychological Injury and the Law*. Reviewer: Steve Rubenzer, Ph.D., ABPP Board Certified Forensic Psychologist
