The basic text for the understanding of patients with pathological narcissism.

Internationally renowned psychoanalytic theorist and clinician Dr. Otto Kernberg here examines the success and failure of sexual love in couples, from adolescence to old age. Dr. Kernberg considers both "normal" and pathological relationships, including the role of narcissism, masochism, and aggression in each. The result expands the boundaries of our current understanding of love relations.

In this important book, one of the world's foremost psychoanalysts provides the clinician with tools to diagnose and treat severe cases of personality disorder, including borderline and narcissistic structures. Dr. Kernberg not only describes techniques he has found useful in clinical practice but also further develops theories formulated in his previous work and critically reviews other recent contributions. "A splendid book . . . of great value for anyone involved in psychotherapy with patients suffering from one or another variety of personality disorder, as well as for anyone who is teaching or doing research in this field. . . . An outstandingly fine and valuable book.--Harold F. Searles, M.D., Journal of Nervous and Mental Disease "Kernberg is a synthesizing, creative eclectic on the contemporary psychoanalytic and psychodynamic scene, broadly based in theory and in practice, a powerful intelligence, a prolific writer, and a man of ideas.... This is a challenging and provocative book."--Alan A. Stone, M.D., American Journal of Psychiatry "A major work that brings together in one volume a host of clinical insights into

## Acces PDF Otto Kernberg

people with a variety of severe personality disorders.... Anyone who has attempted to work with patients with severe personality disorders will be rewarding by studying this book." --Robert D. Gillman, *Psychoanalytic Quarterly*

In this important new book, Dr. Otto F. Kernberg, one of the world's foremost psychoanalysts, explores the role of aggression in severe personality disorders and in normal and perverse sexuality, integrating new developments in psychoanalytic theory with findings from clinical work with severely regressed patients. The book also integrates Dr. Kernberg's recent studies of the descriptive, structural, and psychodynamic features of problems stemming from pathological aggression with the vicissitudes of their psychoanalytic treatment. Finally, Dr. Kernberg demonstrates the importance of differential diagnosis for effective psychoanalytically inspired treatment of these disorders, providing a rich variety of clinical illustrations. The book begins by relating the dual-drive theory of libido and aggression to contemporary developments in affect theory. Dr. Kernberg then applies this general theory of affects to aggression, which in its pathological form centers on the affect of hatred. He analyzes sado-masochistic, hysterical-hysteroid, and narcissistic-antisocial spectrums of personality disorders, emphasizing how aggression is structured in each group. Dr. Kernberg next describes and updates the theoretical frame underlying his approach to the treatment of these disorders, outlines their clinical manifestations, and illustrates their diagnosis and treatment, ranging from standard psychoanalysis with infantile personalities, to psychoanalytic psychotherapy with borderline personalities, to the psychotherapeutic approach to the treatment of psychosis and hospital milieu treatment in the management of highly regressed patients. In the final section, Dr. Kernberg links the findings from psychoanalytic approaches to personality disorders with those from the psychoanalytic study of sexual perversions.

Transference-Focused Psychotherapy for Borderline Personality Disorder: A Clinical Guide presents a model of borderline personality disorder (BPD) and its treatment that is based on contemporary psychoanalytic object relations theory as developed by the leading thinker in the field, Otto Kernberg, M.D., who is also one of the authors of this insightful manual. The model is supported and enhanced by material on current phenomenological and neurobiological research and is grounded in real-world cases that deftly illustrate principles of intervention in ways that mental health professionals can use with their patients. The book first provides clinicians with a model of borderline pathology that is essential for expert assessment and treatment planning and then addresses the empirical underpinnings and specific therapeutic strategies of transference-focused psychotherapy (TFP). From the chapter on clinical assessment, the clinician learns how to select the type of treatment on the basis of the level of personality organization, the symptoms the patient experiences, and the areas of compromised functioning. In order to decide on the type of treatment, the clinician must examine the patient's subjective experience (such as symptoms of anxiety or depression), observable behaviors (such as investments in relationships and deficits in functioning), and psychological structures (such as identity, defenses, and reality testing). Next, the clinician learns to establish the conditions of treatment through negotiating a verbal treatment contract or understanding with the patient. The contract defines the responsibilities of each of the participants and defines what the reality of the therapeutic relationship is. Techniques of treatment interventions and tactics to address particularly difficult clinical challenges are addressed next, equipping the therapist to employ the four primary techniques of TFP (interpretation, transference analysis, technical neutrality, and use of countertransference) and setting the stage for and guiding the proper use of those techniques within the individual session. What to expect in the course of long-term treatment to

## Acces PDF Otto Kernberg

ameliorate symptoms and to effect personality change is covered, with sections on the early, middle, and late phases of treatment. This material prepares the clinician to deal with predictable phases, such as tests of the frame, impulse containment, movement toward integration, episodes of regression, and termination. Finally, the text is accompanied by supremely instructive online videos that demonstrate a variety of clinical situations, helping the clinician with assessment and modeling critical therapeutic strategies. The book recognizes that each BPD patient presents a unique treatment challenge. Grounded in the latest research and rich with clinical insight, *Transference-Focused Psychotherapy for Borderline Personality Disorder: A Clinical Guide* will prove indispensable to mental health professionals seeking to provide thoughtful, effective care to these patients.

In this book a leading psychoanalytic clinician and theoretician presents his thoughts on the latest psychodynamic developments and insights related to treatment of severe personality disorders. Dividing his discussions into two sections, one on psychopathology and the other on psychotherapy, Dr. Otto F. Kernberg examines borderline personality disorder, narcissism, sexual inhibition, transference and countertransference, suicidal behavior, and eating disorders. In each chapter he integrates the ideas of European and Latin American psychoanalytic thinkers, bringing them to the attention of English-speaking readers. This book includes a selection of recently published journal articles. Their collection into one volume makes readily available Dr. Kernberg ' s present thinking on an important subject.

*Object Relations Theory and Clinical Psychoanalysis* is a collection of Kernberg's papers published or presented during the period from 1966 to 1975, with some new material included as well.

## Acces PDF Otto Kernberg

A basic text for the understanding of patients with pathological narcissism.

In this book, Kernberg first distinguishes, then interrelates psychoanalytic, clinical psychiatric, and neurobiological perspectives in a variety of areas, beginning with severe personality disorders and extending to love, destructiveness, mourning, spirituality, and the future of psychoanalytic inquiry. Dr. Kernberg is renowned for his work with borderline and narcissistic patients, and in this book, he offers new approaches to the diagnosis and treatment of the most severe personality disorders, particularly the spectrum of severe narcissistic psychopathology. His effort to relate psychoanalytic to neurobiological findings continues in two fascinating areas -- the study of sexual love and of religious experience -- and he examines object relations theory in relation to these two phenomena. Kernberg's analysis of love and aggression is both bold and nuanced and will captivate the professional psychotherapist as well as the psychologically astute general reader.

Borderline conditions are a growing presence in the treatment room, yet they are uncommonly resistant to treatment. Dr. Kernberg and his colleagues have already articulated the modality they call Transference-Focused Psychotherapy. Now, in an unusually textured elaboration, they confront the complications that limit treatability—co-existing psychopathologies, early trauma/dissociation, problems endemic to the therapeutic situation (attachment disturbances, erotic transferences)—and bring new rounds of clinical ammunition to meet those challenges.
