domestic market. It is documented that Pismo clams were imported sporadically in small quantities up until 1962. After 1962 seafood imports from Mexico into the United States were not identified by species. Mexican landing records for Baja California Norte show that from 1990 through 1999 Pismo clam landings ranged from a low of 822,000 pounds (373

Overview of the Fishery—California

Tivela stultorum, also known as the Pismo clam, is a species of large, edible, saltwater clam, a marine bivalve mollusk in the family Veneridae, the Venus clams. This species is native to the eastern Pacific Ocean. As the name implies, the Pismo clam lives in Pismo Beach, California. It has been found at least as far south as 300 miles south of the US/Mexico border in Baja California on the Pacific Ocean side, where strong surf sometimes washes ashore live clams.

Pismo Clam High Resolution Stock Photography and Images...

Growth as well as erosion pattern and age class analysis indicate that the average size of B. attramentaria in the first 6 yr of life is 3, 9, 12, 15, 17, and 18 mm in length and that longevity falls between 6 and 10 yr. Recruitment of young B. attramentaria occurred every year.

Commercially the Pismo clam (Tivela stultorum)ranks first in importance in California among the clams and third among all the mollusks, being exceeded only by the oyster and the abalone. A second reason for considering this species is that there has been such evidence of depletion as to lead to increasingly more stringent protective laws, all of which have been urged by the residents of the county in which the clam is most abundant. ... An accurate study of the cause and extent of this apparent diminution must await knowledge of at least the fundamental facts of the life history of this clam. ... The more important features are considered to be: the habits, enemies and mortality of the adult; the rate of growth and the factors affecting it; the age at certain significant periods, particularly at sexual maturity and at the time when the legal size is reached; the most common age of clams forming the commercial catch; the season of spawning and the productivity; and the habits, enemies and mortality of the young.
