Just Schools examines the challenges and possibilities for building more equitable forms of collaboration among non-dominant families, communities, and schools. The text explores how equitable collaboration entails ongoing processes that begin with families and communities, transform power, build reciprocity and agency, and foster collective capacity through collective inquiry. These processes offer promising possibilities for improving student learning, transforming educational systems, and developing robust partnerships that build on the resources, expertise, and cultural practices of non-dominant families. Based on empirical research and inquiry-driven practice, this book describes core concepts and provides multiple examples of effective practices. "This is the most compelling work to date on school and community engagement. It will be required reading for all my future classes." –Muhammad Khalifa, University of Minnesota "Full of practical steps that educators and administrators can and must take to build strong collaborations with families." –Mark R. Warren, University of Massachusetts Boston "This important publication provides a way forward for educators, families, students and community members to co-create "Just Schools" by honoring, validating, and celebrating each other's knowledge, skills, power and resources." –Karen Mapp, Harvard Graduate School of Education

The Second Edition of Johnny Saldaña's international bestseller provides an in-depth guide to the multiple approaches available for coding qualitative data. Fully up to date, it includes new chapters, more coding techniques and an additional glossary. Clear, practical and authoritative, the book: -describes how coding initiates qualitative data analysis -demonstrates the writing of analytic memos -discusses available analytic software -suggests how best to use The Coding Manual for Qualitative Researchers for particular studies. In total, 32 coding methods are profiled that can be applied to a range of research genres from grounded theory to phenomenology to narrative inquiry. For each approach, Saldaña discusses the method's origins, a description of the method, practical applications, and a clearly illustrated example with analytic follow-up. A unique and invaluable reference for students, teachers, and practitioners of qualitative inquiry, this book is essential reading across the social sciences.

This book provides step-by-step instructions on how to analyze text generated from in-depth interviews and focus groups, relating predominantly to applied qualitative studies. The book covers all aspects of the qualitative data analysis process, employing a phenomenological approach which has a primary aim of describing the experiences and perceptions of research participants. Similar to Grounded Theory, the authors' approach is inductive, content-driven, and searches for themes within textual data.

What distinguishes great leaders? Exceptional leaders capture passion. They lead for real: from the heart, smart and focused on the future, and with a commitment to being their very best. As Annie McKee and Richard Boyatzis have shown in their bestselling books Primal Leadership and Resonant Leadership, they create

resonance with others. Through resonance, leaders become attuned to the needs and dreams of people they lead. They create conditions where people can excel. They sustain their effectiveness through renewal. McKee, Boyatzis, and Frances Johnston share vivid, real-life stories illuminating how people can develop emotional intelligence, build resonance, and renew themselves. Reflecting twenty years of longitudinal research and practical wisdom with executives and leaders around the world, this new book is organized around a core of experience-tested exercises. These tools help you articulate your strengths and values, craft a plan for intentional change, and create resonance with others. Practical and inspiring, *Becoming a Resonant Leader* is your hands-on guide to developing emotional intelligence, renewing and sustaining yourself and your relationships, and taking your leadership to a whole new level. This book is ideal for anyone seeking personal and professional development and for consultants, coaches, teachers, and faculty to use with their clients or students.

You're trying to help--but is it working? Helping others is a good thing. Often, as a leader, manager, doctor, teacher, or coach, it's central to your job. But even the most well-intentioned efforts to help others can be undermined by a simple truth: We almost always focus on trying to "fix" people, correcting problems or filling the gaps between where they are and where we think they should be. Unfortunately, this doesn't work well, if at all, to inspire sustained learning or positive change. There's a better way. In this powerful, practical book, emotional intelligence expert Richard Boyatzis and Weatherhead School of Management colleagues Melvin Smith and Ellen Van Oosten present a clear and hopeful message. The way to help someone learn and change, they say, cannot be focused primarily on fixing problems, but instead must connect to that person's positive vision of themselves or an inspiring dream or goal they've long held. This is what great coaches do--they know that people draw energy from their visions and dreams, and that same energy sustains their efforts to change, even through difficult times. In contrast, problem-centered approaches trigger physiological responses that make a person defensive and less open to new ideas. The authors use rich and moving real-life stories, as well as decades of original research, to show how this distinctively positive mode of coaching--what they call "coaching with compassion"--opens people up to thinking creatively and helps them to learn and grow in meaningful and sustainable ways. Filled with probing questions and exercises that encourage self-reflection, *Helping People Change* will forever alter the way all of us think about and practice what we do when we try to help.

This book provides the basis for deciding whether to use a qualitative or quantitative approach for the design of a research study and how to write up the results of a study for a journal article or dissertation. Addressing these issues, the author offers a guide to the major design decisions, such as deciding upon a paradigm, stating the purpose of the study, identifying the research questions and hypotheses, using theory and defining and stating the significance of the study.
