Some might say Julian is sheltered. But he lives large, and his eternal optimism allows him to see infinite possibilities wherever he looks. Despite his optimism, he is anxious about his stressed family falling apart. Even his ability to "uni-sense" what's happening with his sister is gone. If he can make his family focus on the magic in the universe, surely they'll appreciate life again. Now that they are moving from Washington, DC, to rural Maine, Julian can use his beloved telescope without any light pollution. He can discover a comet, name it for himself, and show his family how they're all truly connected.As Julian searches the night sky, he encounters a force that may drive his plan apart. His neighbor, Mr. X, could bring an end to his parents' dream of opening their B&B. Could one negative force unravel everything? An avid student of science, Julian understands that there is much about the universe that we don't yet know. Who is to say what's possible and what's not?

The campaign for racial equality in sports has both reflected and affected the campaign for racial equality in the United States. Some of the most significant and publicized stories in this campaign in the twentieth century have happened in sports, including, of course, Jackie Robinson in baseball; Jesse Owens, Tommie Smith, and John Carlos in track; Arthur Ashe in tennis; and Jack Johnson, Joe Louis, and Muhammad Ali in boxing. Long after the full integration of college and professional athletics, race continues to play a major role in sports. Not long ago, sportswriters and sportscasters ignored racial issues. They now contribute to the public's evolving racial attitudes on issues both on and off the field, ranging from integration to self-determination to masculinity. From Jack Johnson to Lebron James examines the intersection of sports, race, and the media in the twentieth century and beyond. The essays are linked by a number of questions, including: How did the black and white media differ in content and context in their reporting of these stories? How did the media acknowledge race in their stories? Did the media recognize these stories as historically significant? Considering how media coverage has evolved over the years, the essays begin with the racially charged reporting of Jack Johnson's reign as heavyweight champion and carry up to the present, covering the media narratives surrounding the Michael Vick dogfighting case in a supposedly post-racial era and the media's handling of Lebron James's announcement to leave Cleveland for Miami.

One of this book's main themes is how God's 'Book of Nature' is concordant with His 'Book of Scripture'. In their writings, many of the pioneers of the Scientific Revolution often referred to God's two 'Books'. These brilliant naturalists were also devout Christians. But that was back then. Is modern science actually compatible with Scripture? More to the point, are the findings of 21st-century science concordant with the Genesis creation story? What else does the text of Genesis 1-2 have to say? While making an honest effort to answer those questions, some vitally-important theological concepts (which were introduced by Moses in the first two chapters of Genesis) are also examined and discussed in this volume. This comprehensive study (on how modern science is concordant with the intended meaning of the text of Genesis 1-2) has many useful features, including the following: Much of the first two parts of the book consists of background material on: (1) logic, (2) history and philosophy of science, and (3) "scientific method", as well as (4) basic geological principles, (5) descriptions of Plate Tectonic theory, and (6) the principles and methods of radiometric dating. This background material is designed to help the reader to understand the implications of the empirical evidence presented in Part Two: God's Book of Nature. Similarly, there is also extensive material on: (1) Biblical interpretation and hermeneutics, (2) textual criticism, (3) the history of ancient Israel, (4) development of the Hebrew language, and (5) some of the basic elements of Biblical Hebrew. This material is given prior to looking at the literary structure and genre of the Genesis 1-2 text, and then conducting thorough and complete exegetical analyses of the various textual units of Genesis 1-2 in Part Four: God's Book of Scripture. Prior to the exegetical analyses for each of the textual units of Genesis 1-2, (1) the Biblical Hebrew text, (2) a standard English translation, and (3) an Interlinear version of the text of that unit are provided. The Interlinear version consists of (a) the Hebrew text, with (b) SBL transliterations and (c) English glosses below each one of the Hebrew words. Color coding and other types of annotations/highlighting are used throughout Part Four: God's Book of Scripture, in order to help the reader identify important Biblical Hebrew elements, including recurring phrases, important BH words, and key BHVS verb forms. There are more than 2000 detailed footnotes. Many of these footnotes also cross-reference other topics in the book to make it easier for the reader to refer back to a discussion of some important theme or concept. Excerpts from the entries of reputable Hebrew and Greek lexicons (for words written in the original languages of the Biblical text) are also footnoted. An Appendix is included with a Key to Transliteration and Pronunciation for Biblical Hebrew graphemes; it also has a short section on Biblical Hebrew Accent Markings. Numerous detailed, colored figures are sprinkled throughout the text. In many of these figures, the artwork itself is worth the inexpensive price of the digital edition of this book. Part Six: The Good News is worth reading as a stand-alone exposition of God's Grace, but it also helps put the rest of the book in context. Although the most common (and logical) way to read A Fresh Look at Genesis 1-2 is from start to finish, this 1100-page book was also intended to be used as a reference work. Footnotes direct the reader back to pertinent material in preceding chapters that might not have been read already (or that readers might want to revisit, in order to refresh their memory on some topic). Forbes editor John Tammy uses entertaining stories from sports, movies, popular culture, and famous businesses to demonstrate the basic principles of economics. The Rolling Stones, the Dallas Cowboys, and Paris Hilton become examples of good and bad tax policy. The Godfather, Gone With the Wind, and The Sopranos reveal the downside of antitrust regulation, while the Michigan Wolverines' 2007 loss to Appalachian State explains why regulations often fail to achieve their intended purpose. NBA star Lebron James' exploits on the basketball court illustrate free trade and comparative advantage, while the cooking of chicken wings makes the case for a stable dollar. Popular Economics is an everyman's guide to how money really works-a lesson politicians try (and fail) to grasp every day.
